This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PEGT strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas ARM Universty BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII

/note="Grgan: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamH1; Site 2: BglII;
RescueMu is a 4.9 kb, modified maize Mu transposon
designed to allow plasmid rescue from total agenomic DNA.
Mu elements insert preferentially into transcription
units. For more information on RescueMu, go to the web
site 'www.radb.iastate.edu' and follow the links for reconserved. RescueMu. Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BglII; and ligated to form circular plasmids. DH10B
cells were transformed and then screened on LB plates with ampicillin."

                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                    This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin-associated proteins or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidoteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, generating altered or improved delta-endotoxin or delta-endotoxin associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.

Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin presence of delta-endotoxin or delta-endo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or

                                                                                             The present invention relates to modified insecticidal Bacillus thuringiensis crystal proteins Cry4Ba and Cry19Aa which have enhanced toxicity against a variety of insects, e.g. meaguitos and legidoptera. The modified proteins are useful for reducing or eliminating populations of target insects that are vectors of disease, particularly mosquitoes. The present sequence is the coding sequence of the wild-type Cry19Aa protein, which can be modified with: a substitution of amino acids at positions 355 through 358 with amino acids tyrosine, glutamine, aspartic acid, and leucine; an insertion of at least one amino acid (e.g. arginine) after position 358 and a deletion of the amino acids at positions 414 through 418.
                                                                                                                                                                                                                                                                                                                                                                                                                                  TCGACAAAATTGAATTCCTCCCAAGTA----ATACAACAACTTTAGAATATGAGGGAGAA

New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, generating altered or improved delta-endotoxin or delta-endotoxin associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin-associated proteins or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Сарв

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2651
                                                                                                                                                                                                                                                                                                                                                                           This gene is ligated to a promoter region enabling expression in Cyanobacteria and the resultant chimeric gene is used to produce Bacillus thuringiensis 8 (Bt 8) protein. A truncated form of the protein can also be produced using a shorter gene. Transformed cyanobacteria and their progeny can be used in insecticidal compsns., esp, for controlling mosquitos. (Updated on 31-OCT-2002 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)

```
Novel chimeric gene expressed in cells of Cyanobacterium for controlling mosquitoes in water, comprises a DNA fragment comprising promoter region and a DNA fragment containing gene encoding for insecticidal protein.
                                           Toxin; Bt8; insecticidal; cyanobacterium; synechocystis 680; endotoxin; mosquito control; glutamine synthetase inhibitor; inoculum; gene; ds.
                                                                                                                                                                                 protein"
                      thuringiensis variant israelensis toxin (Bt8) gene sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             toxin (Bt8) protein of the invention. (Updated on 29-AUG-2003 to standardise OS field)

fragment having a promoter region, for expression of a Cyanobacterium such as Synachocystis 680. The gene comprises a DNA fragment having a promoter region, for expression of a DNA fragment in the Cyanobacterium, and a fragment coding for an insecticidally active protein endotoxin produced by Bacillus thuringiensis, B. sphaericus or B. kurstaki strain, or for a truncated form of the protein. Cyanobacterium is useful for controlling mesquitoes in water by applying the bacterium of the bacterium of the bacterium of the bacterium of express the bar gene are selectively protected against competing nontransformed Cyanobacteria by treating the region with glutamine synthetase inhibitors. The invention is useful as viable incolumn to promote the growth of mosquito larvae. Cyanobacterium provides better control of mosquitoes, ensures a long-term destruction of mosquitoes, guarantees direct uptake of the bacterium by the mosquitoes and assures more stable availability of the toxin in the vicinity surface since it is self replicating and floats at or near the water surface. The present present invention relates to a new chimeric gene expressed in cells self replicating and floats at or near the water surface. The present nucleic acid sequence encodes the B. thuringiensis variant israelensis toxin (Bt8) procesin of the invention (malelane)

toxicity against a variety of insects, e.g. mosquitos and lepidoptera. The modified proteins are useful for reducing or eliminating populations of target insects that are vectors of disease, particularly mosquitoes. The present sequence is the coding sequence for the wild-type Crydsa protein, which can be modified as follows: the amino acid aspartic acid at position 454 is substituted with, for example proline, glycine, alanine or threonine, and at least two or more additional amino acids are substituted amino acids inserted after the substitution, where the amino acids inserted after the substitution, where the amino acids inserted after the substituted amino acid at position of 454 and valine. In addition, the modified Crydsa protein may comprise the following substitutions: Thr456 is crydsa protein may comprise the following substitutions: Thr456 is with alanine; lle580 is replaced with alanine, phenylalanine or tyrosine; Ile581 is replaced with alanine, phenylalanine or tyrosine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2772 TACAAATGAAAATATAGGGTTTGGGTCATGTTTAAAAATATCTTCTCCAGATGGATACGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A toxin active against dipteran insects, having a specified as sequence or a mutant having the same protein secondary structure or, if the structure is altered, having the same biological activity, is claimed. Also claimed is a DNA molecule including a nucleotide sequence encoding the as sequence. The novel toxin gene is toxic to dipteran insects e.g. mosquitos.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3126 ACATGGAGAAAAACGTTGGGAAACACAACAAGCCTATGATCCAGCAAAACAGGCTGTAG 3185
                                                          A plasmid contg. the gene is isolated by forming a gene library from plasmid DNA of B.thuringiensis israelensis (HD 522 strain, USA Goldberg ONR60) followed by screening with anti-israelensis insecticidal protein IG. The insecticidal protein is highly effective against Diptera, esp. Aedes. (Updated on 24-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CAAGTGATAATATCACAATTCAAGAAGATGATCCTATTTTTAAAGGGCATTACCTTCATA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TIAAAATATCTTCTCCAGATGGATACGCATCATTAGATAATTTAGAAGTAATTGAAGAAG 2839
                                                                                                                                  A library was constructed from Bacillus thuringiensis PS71M3 total cellular DNA in lambda Gem-11. Plasmid pMYC1625, selected in Escherichia coli, contained a 8.0 kb insert expressing a beta-endotoxin gene. This was sequenced (AAQ81178). A current acrystalliferous B.t. host carrying pMYC1625 produced a 130 kba crystal protein (AAR63078) toxic to calliphorids. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                     The sequence was obtd. from plasmid pMYC1625 which was isolated from a genomic library prepd. from DNA from B.t. PS71M3 [from B.t. B771M3.69] (NRRL B-18515)]. It is related to the cryIVA family of genes, the 140 kD endotoxin gene and the type II gene from B.t. var. israelensis. The gene encodes a 130 kD protein. Microorganisms transformed with the DNA may be administered to dipteran insects or their environments, the expressed toxins acting as an insecticide.
